Introduction

Your Day – Handy Day.

Handy Day 2005 is a today screen application. It shows you summary of today's information: appointments, tasks, new messages and even weather forecast. Handy Day also helps you to perform regular tasks: start applications, access phone settings and favorite contacts.

Main features

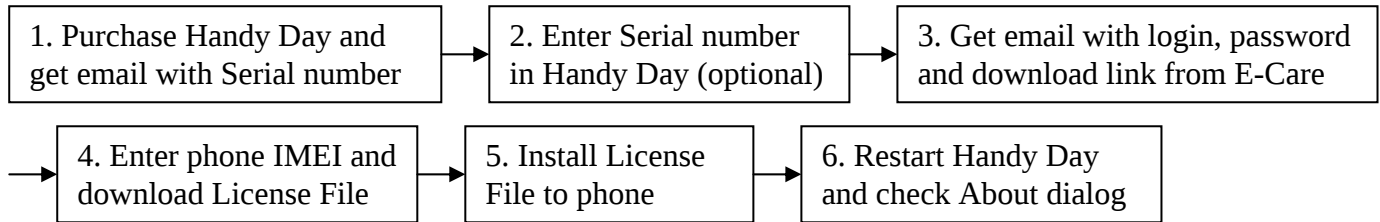

1. Handy Day 2005 works in the both **Flip Open** and **Flip Closed** modes (on Sony Ericsson phones).
2. Handy Day 2005 has **plugin architecture**. Every part of information on the screen is a plugin (e.g. appointments, tasks, weather, etc.). You can configure what plugins and in which order are to be shown. Thus you can construct your own today screen like a LEGO and tune the phone to your personal needs and wishes.
3. Handy Day 2005 has **skins**. You can completely change the look and functionality of your smartphone by applying new skins: make it a Windows XP looking with XP style navigation or turn it into Mac design. It's up to you to choose.
4. **Key Mapper**, an additional Control panel component for mapping phone keys to different actions (e.g. you can press the **Internet key** to start Handy Day 2005).
5. **Popup menu**, an additional Control panel component for quick applications start and switch. Press and hold the **Internet key** to invoke it.

Supported phones: Sony Ericsson P800, P900, P910, BenQ P30, and Motorola A1000, A1010.

Note: Handy Day 2005 is optimized to work on Sony Ericsson phones. Some of its features might not work properly on other phones.

Registration procedure

Please read and understand the following steps. This will help you to register your copy of Handy Day 2005 easily. Here is the procedure overview and the detailed description:

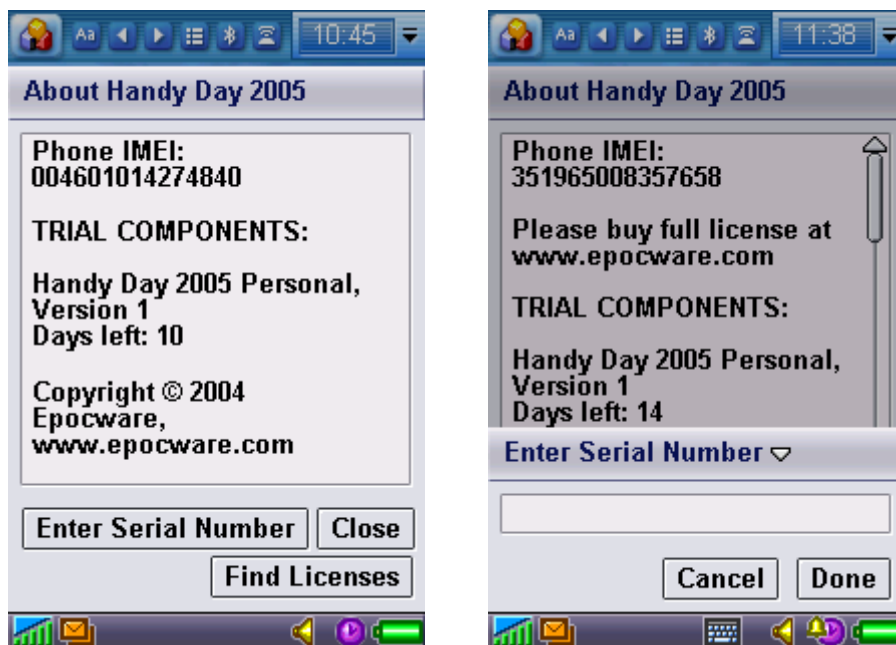

Step 1: Go to Handy Day 2005 page at www.epocware.com and press  button at the top. Choose **Handango** e-commerce system and follow the instructions. You will be lead through several stages from shopping card to entering your credit card details. At the end you will be provided with a download link and your **Serial Number** will be sent to you **by email** to the address that you specified.

Tip: You may not download and reinstall Handy Day 2005, because the download link contains the same version that is freely available on www.epocware.com.

Step 2: Open the Start menu in Handy Day 2005 and choose **About**. In the appeared **About dialog** press **Enter Serial Number** and enter it. This will give you **20 additional days** to complete your registration (see next steps).

This step is optional and you can skip it.

Step 3: Within 12 hours after placing your order at Handango you will get an email from our Customer Support System **E-Care** with the subject “Your registration of Handy Day 2005”. The letter will contain your **login** and **password** to E-Care system and the **direct link** for getting your **License**. Follow this link (use **Internet Explorer 6**, other browsers might not work properly) and enter your login and password.

Note: Using E-Care system requires TCP port 8080 to be open on your PC. If it is blocked by firewall, you will not be able to open the link.

Step 4: You will be asked several questions including your phone **IMEI** number. You can find it in the About dialog in Handy Day 2005 or by typing ***#06#** in Phone application. Answer all questions and press the **Complete** button. Then you will be provided with a download link.

Step 5: Download and extract a ZIP archive file on your PC. Install **HandyDayLicense_Personal.sis** file to your phone as you install other applications. The installation will put **HandyDayLicense_Personal.lcs** file to the **Phone memory\document\Licenses** folder. This is your **License File**. **Never delete it!**

Step 6: Restart Handy Day 2005 (exit and start again, not reinstall). Open the Start menu in Handy Day 2005 and choose **About**. In the appeared About dialog you will see:

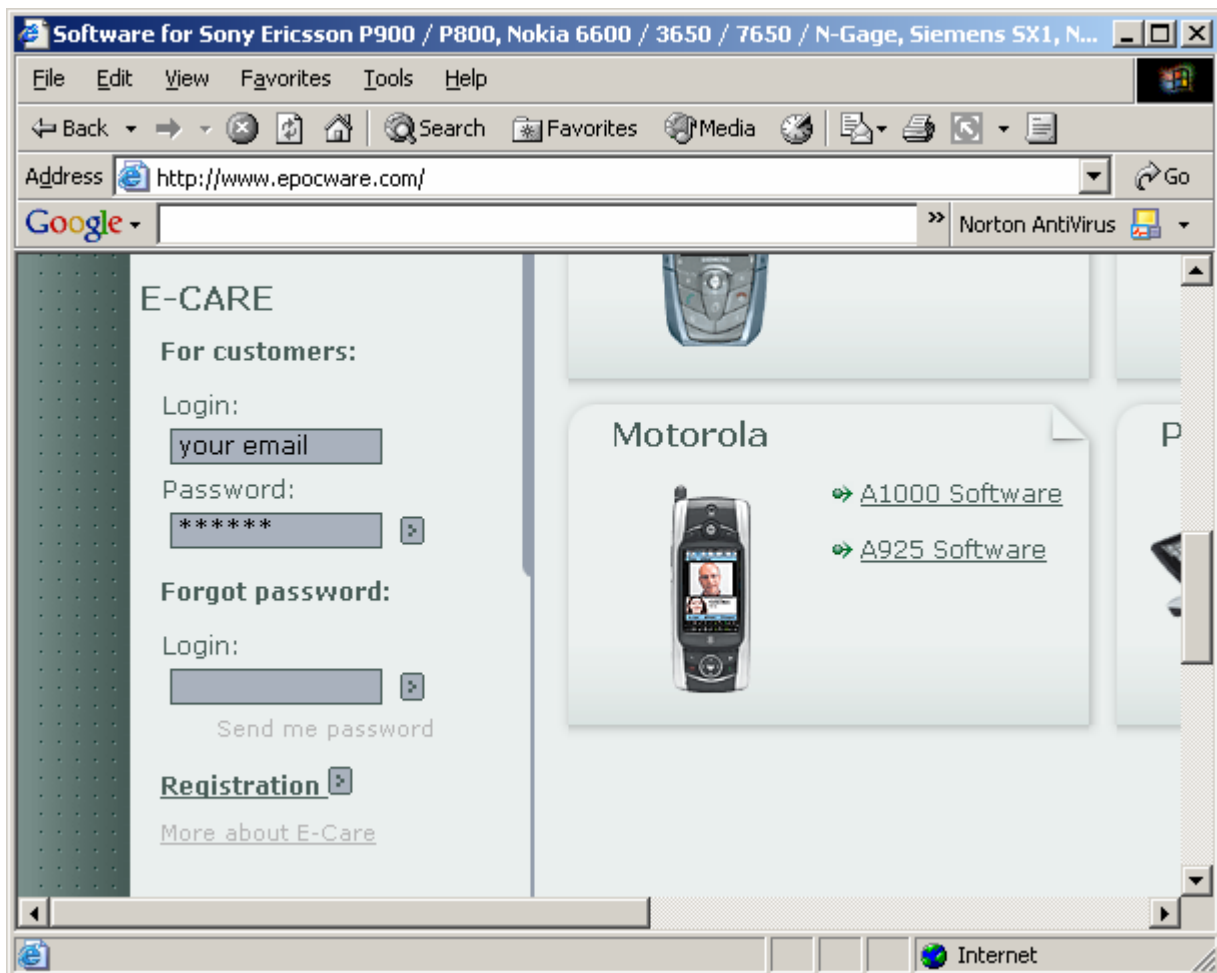

LICENSED COMPONENTS:
Handy Day 2005 Personal, version 1.x

If not, press the **Find Licenses** button in the About dialog.

Troubleshooting

If the link for getting your License doesn't work, or if you did not get the letter with subject "Your registration of Handy Day 2005", because of your spam filter, then:

1. Go to www.epocware.com and enter your email address (login) into the **Forgot password** field and press Enter. You will get your password by email soon.
2. Login to **E-Care** system.

3. Go to the **View products** section. Then press **Get product** (or **Get Latest Version**).
4. Continue from the Step 4 of the **Registration procedure**.

Installation

Handy Day 2005 installation file **HD2005.sis** can be installed from PC or from the phone. Please refer to your phone's User Guide for details.

Attention: Sony Ericsson P800 owners have to switch off/on phone after Handy Day 2005 installation and uninstallation.

Compatibility

Handy Day 2005 can be installed together with Handy Day 2004. But we recommend disabling auto start and key mapping features of Handy Day 2004 and use appropriate Handy Day 2005 functions instead.

Handy Day 2005 is not compatible with other 3rd party applications that capture phone keys and/or perform any uncommon system actions (e.g. SMan, Tracker, QuickContacts). We strongly recommend removing or deactivating these applications before installing Handy Day 2005.

Reinstallation

If you already have Handy Day 2005 installed on your phone, then DO NOT uninstall it before installing a new version of Handy Day 2005. If you do this, you will lose your plugin configuration and the current skin.

Attention: Sony Ericsson P800 owners have to manually exit from Handy Day 2005 (if it is running) before reinstallation or uninstallation.

Usage

Start Handy Day 2005 from Applications as you start all other applications. Alternatively, you can start it by pressing the **Internet key** (on the right side of Sony Ericsson phones under the Camera key). This is the fastest way to get to Handy Day 2005 from any phone application in the both Flip Open and Flip Closed modes.

Pages

In Handy Day 2005 you have several pages. There are several ways to switch between pages:

1. Press the Internet key to cycle between pages.
2. Press the Jog Dial forward or backward to go to next or previous page (on Sony Ericsson phones, on others use left and right keys). If you press the Jog Dial backward on the first page, you will go to the Applications list.
3. Use appropriate buttons on the current page (they might be missing in some skins).

In the default skin there are two pages in the Flip Open mode and two pages in the Flip Closed mode. Other skins can contain arbitrary number of pages.

Plugins

Every page in Handy Day 2005 contains several plugins. Plugin is a horizontal piece of the screen that shows some information and/or performs some actions. For example, **Appointments** plugin shows your today's meetings and you can tap its Calendar icon to go to Calendar application. Plugins are independent one from another and can be freely added/removed to/from any page.

Navigation

Handy Day 2005 supports two types of navigation: using pen (the Flip Open mode only) and keys (the Jog Dial on Sony Ericsson phones, arrow keys on others). When using the Jog Dial for navigation, scrolling up and down moves focus between plugins and buttons on the page.

You can press the Jog Dial on some plugins (e.g. **Applications**, **Contacts**) to *enter* them and scroll between their own items (e.g. application or contact shortcuts). Press the Jog Dial backward to *exit* from the plugin.

Tip: You can press the # key on the phone keypad to change font boldness.

Start menu

The default skin has the **Start button**, which opens the **Start menu**. From the Start menu you can perform the following tasks:

1. Start any standard phone application (e.g. Calendar or Tasks).
2. Create new message, appointment, task, etc. in appropriate phone application.
3. Invoke specific Handy Day 2005 dialogs: Plugins, Skins, About.
4. Exit from Handy Day 2005.

Note: 3rd party skins can have different menu structure.

Note: To invoke the Start menu in the Flip Closed mode press the Menu key on the phone keypad (at the top right corner).

Flip Open and Flip Closed pages have different Start menus, because not all applications available in the Flip Open mode are available the Flip Closed mode and otherwise.

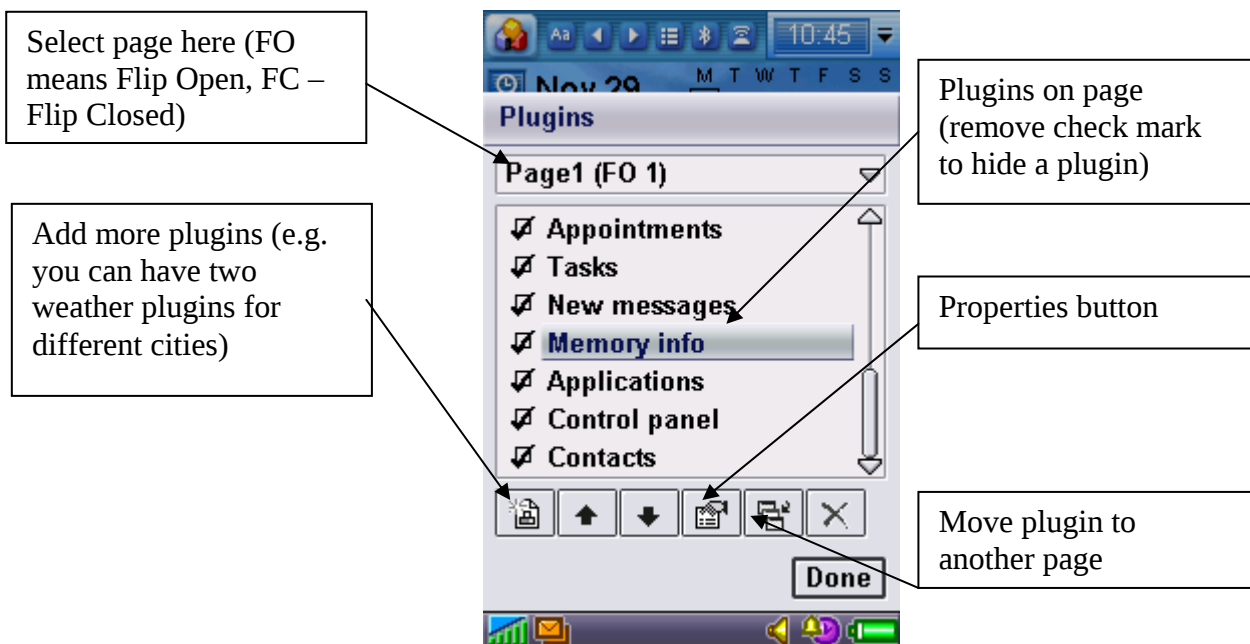

Tip: In the Flip Closed mode you can use number shortcuts for faster menu navigation.

Configuring plugins

Initially Handy Day has a default plugin configuration. You can completely reconfigure it according to your concrete needs and wishes. For example, if you do not use Calendar for tracking meetings, you can remove Appointments plugin. Or if you want to know the weather in your home city and in a city you are traveling to, you can add another weather plugin and set it to show the desired city.

To configure plugins go to the Start menu and select **Plugins**. In the appeared **Plugins dialog** choose a page in the top choice list to see its plugins. Use the toolbar at the bottom to add, change position and delete plugins. Unselect check mark next to a plugin name to temporary hide it.

Select a plugin and press the **Properties** button on the toolbar to edit the plugin settings. For example, in Weather plugin settings you can change city, in Contacts/Applications plugins – add your favorite contacts/applications, in Appointments – set format and maximum number of appointments to show.

Changing skins

Skinning is a way to completely change look and even functionality of Handy Day 2005.

Downloading skins

Handy Day 2005 comes with several high-quality skins. Install **Skins.sis** file on your phone to be able use them.

The main place to download additional skins is Handy Day 2005 home page at www.epocware.com. There you will find the standard skins distributed for free and 3rd party commercial skins.

Another place for finding skins is www.handango.com. Type “Handy Day 2005 skin” in the search box to get a list of available skins.

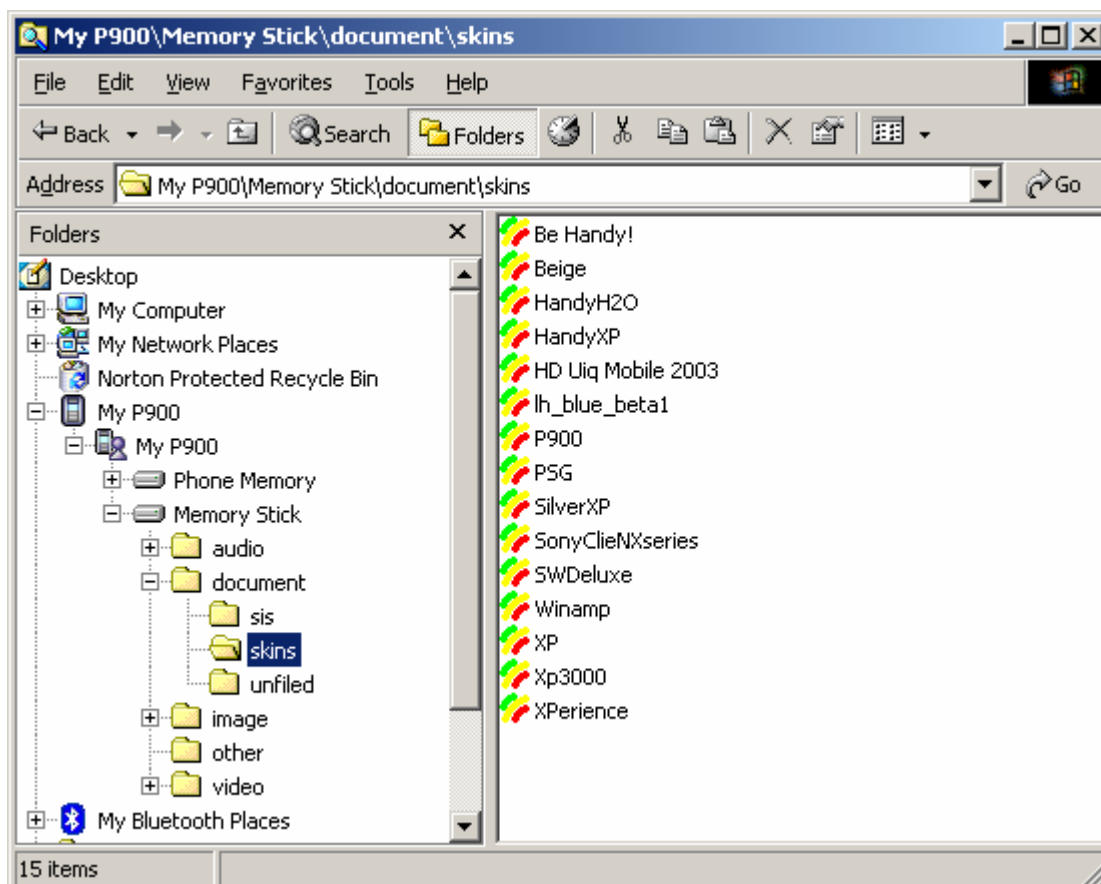

Attention: When downloading skins from the Internet, pay attention to this logo. It means that skin was tested on compatibility with Handy Day 2005 and satisfies some minimal functional and usability requirements. Installing skins that do not have this logo might lead to Handy Day 2005 malfunctioning. We strongly do not recommend this.

Copying skins into phone

If a skin comes in a **SIS file** (like the standard ones), then just install this file on your phone.

If a skin comes in a **SKZ file**, then copy it to any folder on your phone (e.g. Memory stick\document\skins) using PC Suite. Or beam it via Infrared or Bluetooth.

Applying skins

Open the **Start menu** in Handy Day 2005 and select **Skins**. In the appeared **Skin dialog** you will see all skins on your phone. Choose a skin and press **Apply**.

Tip: You can always return to the default Handy Day 2005 skin by pressing the **Default** button in the Skin dialog.

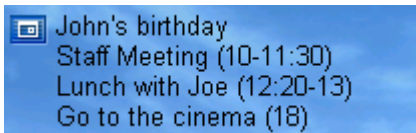

Plugins

Date

Date plugin shows today's date together with the tiny week representation. Click on the **Time icon** to go to Time application. Click on the date to change it. Click on the week to see the whole month.

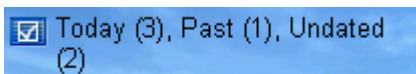

Appointments

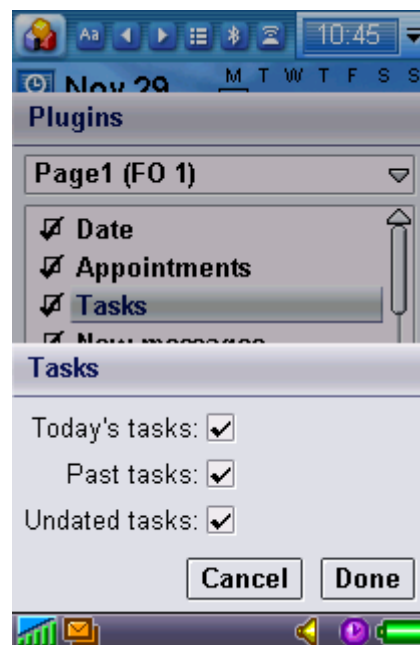

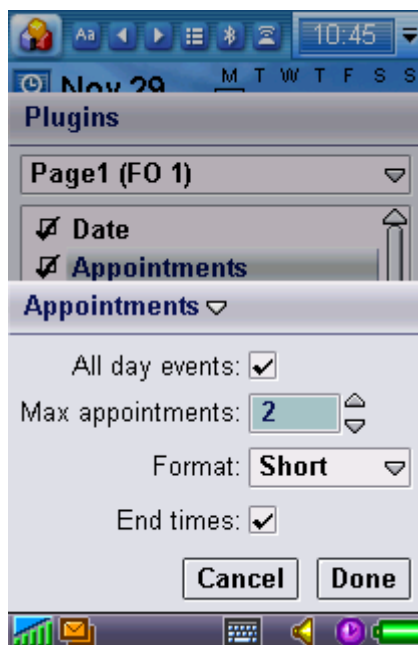

Appointments plugin shows today's appointments, day events and reminders. You can configure their maximum count and format (normal/short/two lines, with or without end times). You can also set the number of advance days to show.

Click on the **Calendar icon** to go to Calendar application.

Tasks

Tasks plugin shows number of today, past and undated tasks. Click on the **Tasks icon** to go to Tasks application.

New messages

New messages plugin shows number of new messages in each mailbox (SMS, MMS, email). Click on the **Message icon** to go to Messages application.

Memory info

Memory info plugin shows amount of free memory: RAM, Phone memory (drive C) and Memory stick (drive D).

Tip: To refresh the plugin information just click on it.

Weather

Update button

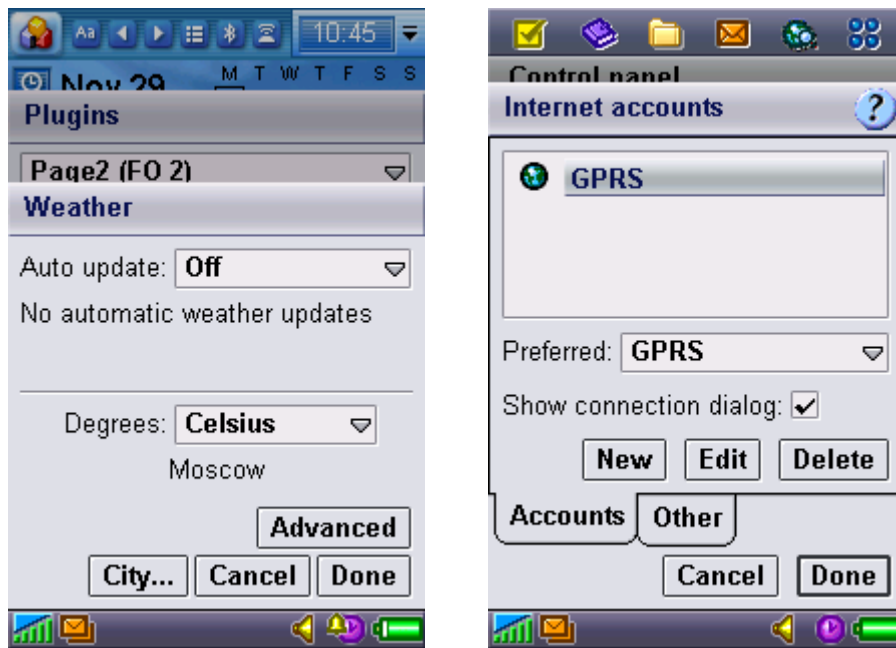

Weather plugin shows five-day weather forecast for some city. Over 1400 cities are available. In the plugin settings you can choose desired city and temperature degrees (Celsius or Fahrenheit). Weather data is provided by the server of AccuWeather Sales and Service, Inc <http://www.accuwx.com>.

Press the Jog Dial on the plugin or tap the **Update** button in the top right corner to download weather forecast. The **Status icon** shows download status (the **Globe** means connecting, the **Blinking terminals** mean getting information, the **Check mark** means success and the **Red cross** means error).

Tip: Click on the weather icons to get weather details.

If you cannot download the weather, check that you have working Internet account on your phone and your weather subscription is valid. For demo version you have 14 days trial weather subscription. With registered version of Handy Day 2005 you have one-year subscription.

Upon expiration of one-year subscription you may choose to subscribe for the next one or three years if you are willing to continue receiving weather forecasts for your locations. This can be done at Handy Day 2005 home_page at www.epocware.com at your convenience. Note: you don't have to wait until initial one-year subscription expiration to prolong the subscription to the weather service.

Internet connection

You must have an Internet (GPRS) connection on your phone to be able to download weather forecasts. Please refer to the phone's User Manual for information how to configure **Internet account** in **Control Panel** application. Contact your mobile network operator for connection settings.

Attention: You must have Internet-GPRS account. WAP-GPRS account **will not work**.

Tip: To check your Internet connection, start Internet or Opera browser on your phone and try to open any web site (e.g. www.epocware.com).

If you have a working Internet connection, but the weather update still does not work, press the **Advanced** button in the weather settings and set to use TCP port 80. This could help if your mobile network operator blocks port 8080 that is used for downloading weather by default.

Auto updates

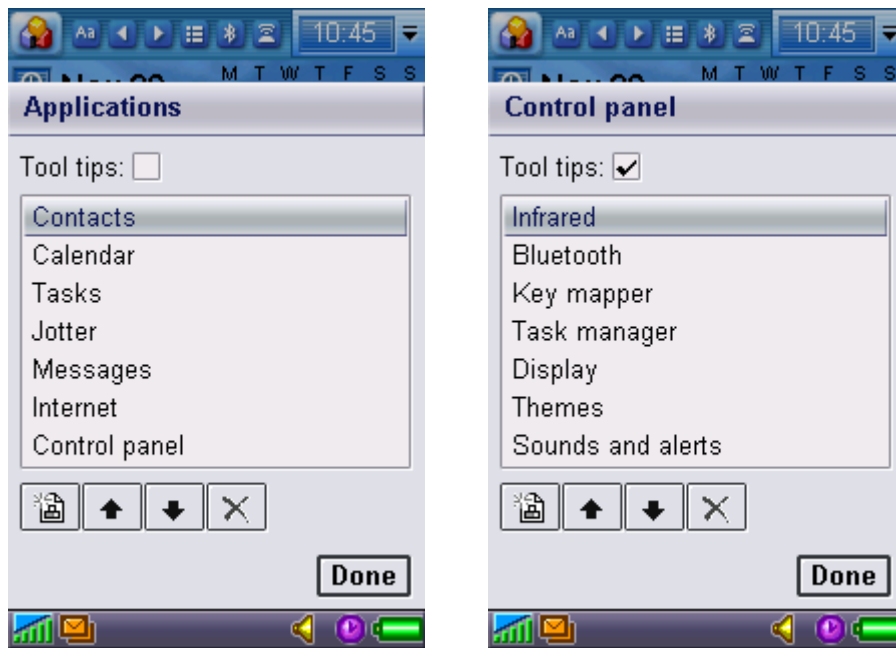

You can configure the plugin to download weather updates automatically (1, 2 or 4 times per day). Auto updates work only if Handy Day 2005 is running on your phone.

Applications

Applications plugin is intended for launching your favorite applications from Handy Day 2005. In the plugin settings you can configure its contents.

Tip: When navigating with the Jog Dial, press it to *enter* the plugin. Scroll between applications. Press the Jog Dial backward to *exit* from the plugin.

Control panel

Control panel plugin enables you to access phone settings directly from Handy Day 2005. In the plugin settings you can configure its contents.

Contacts

Contacts plugin enables fast navigation to your favorite contacts in Contacts application for making calls or sending messages. In the plugin settings you can add desired contacts. For each contact you can choose an icon or use a photo assigned to this contact in Contacts application. To use the photo select the **Camera icon** in the **Choose icon dialog** (this is default setting).

Tip: When navigating with the Jog Dial, press it to *enter* the plugin. Scroll between contacts. Press the Jog Dial backward to *exit* from the plugin.

Quotes

💡 If it seems too good to be true, it probably is. Murphy's Laws on love

Quotes plugin shows famous quotes. You can provide your own text files with quotes.

World clock

World clock plugin shows the local time in two cities. You can select desired cities in the plugin settings. Pressing the Jog Dial on the plugin will switch between its Normal and Compact modes.

Tip: If the plugin shows the wrong time for a city:

1. Go to **Time** application.
2. Choose **Set time & date** in the menu.
3. In the appeared **Time & date dialog** press the **Summer time** button.
4. Make sure that the summer times are correct for your home and the city zones.

Mini calc

Mini calc plugin allows you perform simple calculations in the Flip Closed mode.

Utilities

Key mapper

Key Mapper utility allows mapping different actions to phone keys (e.g. start of your favorite application). You can map two actions to each key. One action can be mapped to a normal key press and another to key press-and-hold.

You can map different actions in the Flip Closed and the Flip Open modes. By default the Internet key press is mapped to start Handy Day 2005. And the Internet key press-and-hold is mapped to invoke Popup menu.

You can also assign any application to pop up at Flip opening.

Configuration

To configure key actions go to **Control panel** and choose **Key mapper**. Choose the desired mode (Flip open or Flip closed) and press the **New mapping** button.

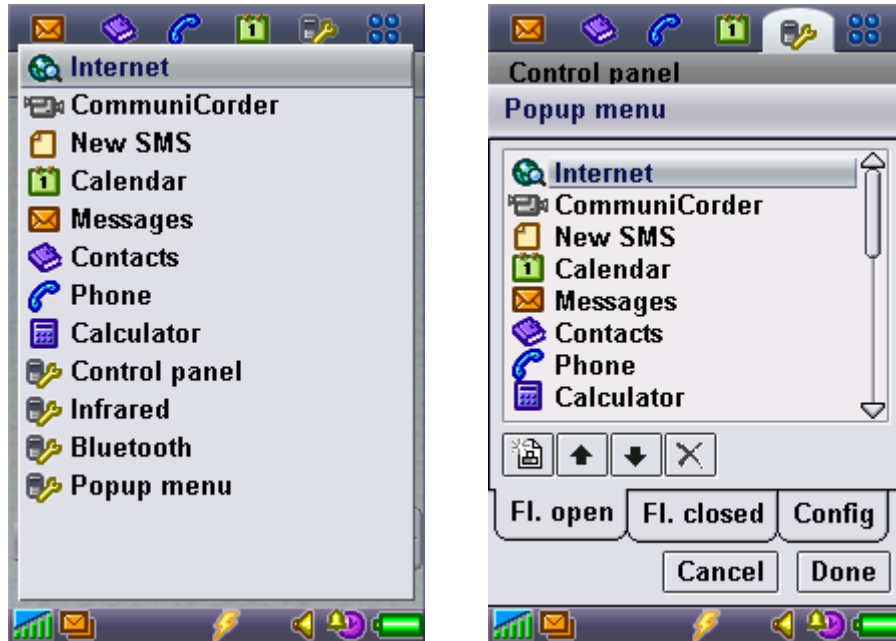

Tip: Set the **Disable Key mapper** check box to temporary disable Key mapper.

Attention: Key mapper starts automatically, when you switch on your phone. Key mapper **does not start automatically** after phone backup/restore operations. To activate Key mapper restart (switch off/on) your phone again.

Popup menu

Popup menu is a useful utility that allows you to start, switch and close applications in a convenient way. You can also quick access Control panel items, make calls, create new appointments, tasks, SMS/MMS/E-mail messages. Popup menu works in the both Flip Open and Flip Closed modes (for Sony Ericsson phones).

Popup menu has two panes: **Launcher** (to start applications) and **Switcher** (to switch and close running applications). Press and hold the **Internet key** to invoke the Launcher pane. Press the **Jog Dial forward** to go to the Switcher pane.

Configuration

To configure Popup menu go to **Control panel** and choose **Popup menu**. There are three tabs:

1. The **Fl. open** tab to configure the Launcher pane in **the Flip Open** mode.
2. The **Fl. closed** tab to configure the Launcher pane in **the Flip Closed** mode.
3. The **Config** tab to configure Popup menu settings.

Attention: Popup menu starts automatically, when you switch on your phone. Popup menu **does not start automatically** after phone backup/restore operations. To activate Popup menu restart (switch off/on) your phone again.

Status pane icon

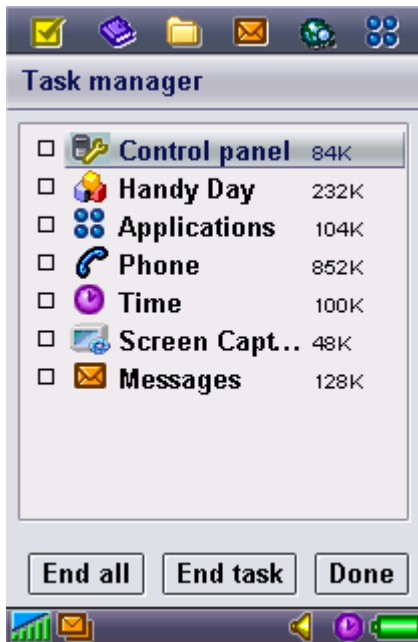

You can also invoke Popup menu by tapping its **icon** (Lightning) on the phone's status pane. Tap it again to go to another pane. Tap and drag the icon to move it along the status pane.

You can switch on/off the status pane icon in Popup menu settings (on the **Config** tab). You can also hide it in some applications (e.g. in Internet application, which is often used in the full screen mode).

Attention: There is a conflict between **Pictures** application on Sony Ericsson P910 phone and the status pane icon of Popup menu. If the status pane icon is visible, Pictures will not go into full-screen mode and may even "hang". That's why the status pane icon is hidden when you are in Pictures application.

Task manager

Task Manager utility enables switching between and closing applications running on your phone. You can access it via Control Panel application or via **Control panel** plugin in Handy Day 2005.

Support

Support Knowledge Base is available to our customers. There you can find detailed answers to frequently asked questions about all programs by Epocware.

Welcome to <http://support.epocware.com>

If you have any problems with the registration procedure, please write to support@epocware.com with subject “Handy Day 2005 registration” and provide us with the following details:

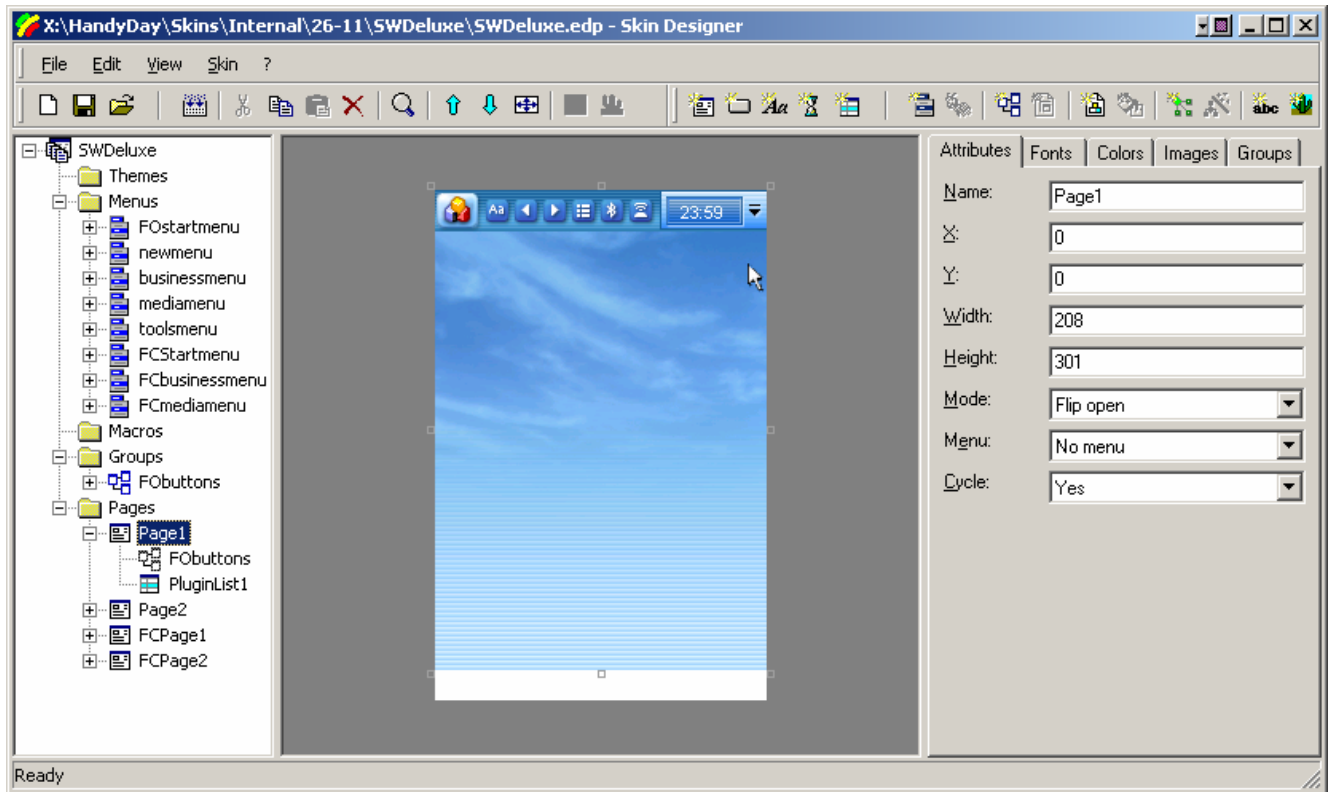

1. Your full name.
2. Your email address, which you specified during the purchase.
3. Date of your purchase and the order number.
4. Your phone IMEI number (to know it type *#06# in Phone application).
5. Description of your problem including step number you are having problems with and full text of error messages.

This will help us to assist you faster. Your letter will be replied within 3 business days. Please note, we reply on workdays. We do not reply on weekends and on official holidays.

Advanced

Making skins

Handy Day 2005 has powerful skinning system. It allows building very complex and flexible User Interfaces that contain different pages, menus, and buttons. Visual Skin Designer with the detailed Help and examples are available for free download at Hand Day 2005 home page at www.epocware.com (see the **Making skins** link at the right side).

Skin Certification

We are running a special Skin Certification program “[For Handy Day](#)” to distinguish high quality skins and to provide their developers with exclusive technical and marketing support to promote skins. We can help you to reach thousands of customers from all over the world, in particular:

- Put your skin to our [3rd party Skins](#) library at epocware.com
- Cross-sell your skin directly with Handy Day 2005

You can get more information about Skin Certification from the Skin Designer Help file or by contacting us at HandyDay@epocware.com with subject “Skin design”.

Developing plugins

It is possible to develop your own plugins for Handy Day 2005. If you have an idea for a plugin or develop an application that could be integrated into Handy Day 2005 as a plugin, you are welcome to contact us.

For more information and APIs please email at HandyDay@epocware.com with subject “Plugin development”.
